

HUC1__01030500

Katherine Schlef

November 26, 2018

Gage Information

HUC: 1

USGS gage ID: 01030500

Latitude: 45.505; Longitude: -68.302

Catchment area: 1418 square miles

Catchment elevation: 230 feet

Data availability (80 water years): 10/1/1935-9/30/2014

Flood Information

Mean Flood Date: 04/19

Flood Seasonality Index: 0.784

Table 1: Peaks-over-threshold floods (record flood bolded)

Date	Streamflow (cfs)
1936-03-23	29200
1947-05-08	23600
1958-04-26	25400
1973-05-01	23600
1976-04-06	27300
1979-03-29	24400
1993-04-15	25900
1994-04-19	24800
2014-04-18	25200

Figure 1: Streamflow at time of record flood (record magnitude in red)

Reanalysis Data

Figure 2: Reanalysis climate data two days before record flood at 850 mbar where vectors are wind (units m/s, multiplied by 2) and color field is specific humidity (units kg/kg) (red dot is gage location)

Figure 3: Reanalysis climate data two days before record flood (left) omega at 850 mbar (vertical velocity in pressure units Pascals/s) and (right) air temperature at 1000 mbar (units deg C) (red dot is gage location)

Hurricane Data

No hurricane (Figure 4 not created)

Extreme Precipitation Data

No extreme precipitation/data not available (Figure 5 not created)

Tropical Moisture Export Data

Data not available (Figure 6 not created)

Historic Report Data

No data

Self-Organizing Map Results

Self-organizing map classification of cause of record flood: eastern front

Figure 7: Event (1936-03-23) based on self-organizing map analysis (red dot is gage location, no other gages included)

Best Guess

tbd
